YOU ARE UNCOVERING NOVEL IDEAS TO DEFEAT DIABETES

Thank you for championing new ways to fight back against Diabetes!

Diabetes threatens quality and length of life for a huge portion of the population. But science has yet to defeat this insidious problem.

You are uncovering groundbreaking research different from any other studies done on diabetes.

Sanford Burnham Prebys researcher Duc Dong has unconventional ideas. When he first proposed this idea (to convert beta cells) to a mentor years ago, his mentor laughed at him.

But today, that research is making waves. The study was recently featured in The San Diego Union-Tribune.

Because of you, Dong and his team have been exploring methods to transform one type of cell into another. The goal is to create beta cells that will produce blood sugar. This could positively impact or even eliminate diabetes. >>>

YOU HAVE TAKEN A BIG STEP IN FIGHTING MELANOMA!

**YOUR SUPPORT OF SCIENCE
IS PAYING OFF AGAIN!**

Thanks to you, Dr. Ze'ev Ronai and his team have recently uncovered an incredible secret. Suppressing the naturally-occurring enzyme GCDH kills melanoma cells, and stops tumor growth!

This is HUGE news for patients dealing with the most severe form of skin cancer. It may be the key to fighting Melanoma.

Tumors require lots of food for their rapid growth. Researchers have tried eliminating food sources, but cancer cells find other fuel.

Thanks to you, we now know that Melanoma cells are "addicted" to GCDH. Melanoma cannot survive without it. >>>
